

Rigid Window (Makrolon AR2) Care and Cleaning **Information**

Cleaning

- Rinse off excess dirt and debris with plain water.
- Using soft cloth towels or microfiber towels clean with a mild soap or cleaner.
- Rinse again
- Dry with a soft cloth (helps eliminate/reduce water spotting)
- Apply a polish as needed to the recently cleaned makrolon. This will help protect the polycarbonate and its anti-abrasion coatings.

Cleaning Agents

- Plas-Tec Plastic cleaner and polish by Mermaids
- Mermaids Cleaner
- Plexus Plastic Cleaner
- Mild Detergent (Woolite, Dawn, etc)

Polishes

- Plas-Tec Plastic cleaner and polish by Mermaids
- Novus Plastic Polish #1
- Mequiar's Mirror Glaze #10

Please do not use the following methods/products on your Makrolon windows, as they may seem to work at first, but can in a short time react with and damage your investment

- Squeegees, razors, or other abrasive objects
- Abrasive Polishes or Rubbing Compounds
- Rain-X (this may seem to work at first, but can start reacting with the polycarbonate and ruin it), try one of the polishes instead
- Wipers. A hand operated wiper sounds great at first, but will quickly rub off the coating on the Makrolon. If you need a wiper operated panel we can accommodate that with a Sea-View window.

If you have any questions or concerns with cleaning/maintaining your enclosure, please give us a call. 503-283-3670
